had started in May 1953, continued in September, with about 200 armored personnel carriers and armored scout cars including about 140 for the KVP, and about 60 rocket launchers arriving in September. The total of vehicles and guns shipped from the USSR between May and late September 1953 thus amounted to about 650 armored personnel carriers and armored scout cars including 150 vehicles for the KVP, and about 330 rocket launchers. The growing vol

AIR FRI

No less than 300 new motor vehicles and tractors, including 50 to 70 motor vehicles for the air force equipment depot at Strausberg alone arrived during this period. The ammunition supply which was rather small included 22 carloads for the filling of the new troop depot at Bad Saarow. The fact that this installation, although a division depot only, received 300 to 350 tons of ammunition again confirms that small organizational ammunition depots are also well-stocked up. The supply of tank spare parts and food rations was still unusually small. While the low tank spare part supply may be made up by increased delive ies from Soviet-Zone production, the small ration supply shipments cannot be accounted for. It had rather been expected that because of the diminish d stocks of the Frankfurt/Oder main depot supply shipments would arrive at an increased rate and above average. It 25 cannot be said to what extent the depot will be refilled with Soviet-Zo e deliveries. The supply of motor vehicle spare parts increased, especially with regard to iron and steel raw material. The volume of		SECRET/CONTROL - U.S. OFFICIAL
